Claim 2; Page 57-58; 71pp; English.

This is the amino acid sequence of the mouse 312C2 T cell protein. The 312C2 proteins are expressed in thymus cells and are induced on T cells and spleen cells following activation. Engagement of 312C2 stimulates proliferation of T cell clones, antigen-specific proliferation and cytokine production by T-cells, and potentiates T cell expansion or apoptosis. The products can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions or degenerative conditions. They can be used in the regulation or development of haematopoietic cells,

                                                                                                                                                                                                                                                                                                                                                     The present claimed sequence represents a mouse glucocorticoid induced TNFR-family related protein (GITR). The invention also claims for GITR-B (AAM49017) and GITR-C (AAM49018) which are splicing variants of GITR. The GITRs are claimed to be useful for stimulating lymphocyte activity and suppressing the lymphocyte activity and for inducing apoptotic deletion. GITR cDNAs and the proteins they encode are also claimed to be useful for suppressing growth of tumour cells over-expressing GITR or to the treatment of refractory hodgkin's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The present invention relates to the isolation or noves number to concerosis factor (TNF) receptor-like proteins, designated TR11, TR115V1 and TR115V2 receptors, and the polymucleotide sequences for TR11, TR115V1, and TR115V2 receptors, and the polymucleotide sequences for TR11, TR115V1, and TR115V2 are useful in assays to test one or more biological activities of TR11, TR115V1 and TR115V2 polypeptides, for proliferation, as markers or differentiation and mobilisation of immune cells, and as markers or detectors of a particular immune system disease or disorder. They are also useful in treating or detecting deficiencies or disorder. They are calco useful in treating or detecting deficiencies or disorders of the amatopoletic cells, to increase differentiation and proliferation of hematopoletic cells, to increase differentiation and proliferation of detectors calcourse associated with a decrease in haematopoletic cells. Including pluripotent stem cells in an effort to treat disorders are also useful for modulating haemostatic or thrombotytic calcuty, for treating blood coagulation disorders, blood platelet disorders or wounds resulting from trauma, as well as for treating stroke, myocardial infarction and scarring. They may be used for detecting or treating autoimmune disorders (e.g. Addison's disease, clabetes mellitus, multiple crown as asthma, for treating and/or preventing organ rejection or graft versus host disease (dishetes mellitus, multiple cortical manufactions and cancers, for treating or modulating inflammation (e.g. septic shock and sepsis, isothermia-reperfusion injury, endotoxin celebality, induced lung injury and crohn's disease), beterting or treating or electing infections agents in electing or detecting infections agents in sources are also useful in expronse against infectious chemetriating, proliferating and attracting cells for tissue the polymucleotide sequences are also useful in exproprient and electing inferentiating and injury and differentiating and entering and electing inferentiation
Novel nucleic acids encoding human tumor necrosis factor receptor-like proteins TR11, TR11SV1 and TR11SV2, useful for treating blood coagulation disorders, blood platelet disorders, stroke and myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   therapy, and for proliferating and differentiating peripheral nervous system diseases such as spinal cord disorders, cerebrovascular diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis and Shy-Drager syndrome. The present sequence represents murine glucocorticoid-induced tumour necrosis factor receptor family related protein (GITR).
                                                                                                                                                                                                                                                                                                                                                                                present invention relates to the isolation of novel human tumour
                                                                                                                                                                                                                                                                       Disclosure; Fig 4; 70pp; English.

```
amino acids as given in specification. (I) is useful for detecting tumour necrosis factor (TMF) receptor-like proteins TR11SV1 or TR11SV2 protein to a biological sample, which involves contacting the biological sample with (I), and detecting the TR11SV1 or TR11SV2 protein in the biological sample. (I) is a labeled antibody, the label is chosen from an enzyme label, a radioisotope, a fluorescent label, and biotin. The method described is useful for treating inflammation. Also described is method useful for treating bone disease or a disorder such as Paget's disease, of the operrosis, craniometaphyseal dysplasia, fibrodysplasia ossificans progressiva, gigantism, or osteoclastomm. (I) is useful for treating autoimmune disorders e.g. autoimmune haemolytic anaemia, autoimmune disorders e.g. autoimmune haemolytic anaemia, autoimmune disorders e.g. severe combined immunodeficiency and Wiskott-Aldrich syndrome. (I) is also useful for treating rheumatoid arthritis, systemic lupus erythematosus, graft-versus-host disease, casthma, cancer, Grave's disease, blood coagulation disorders and platelet disorders (thrombocytopenia). This is the amino acid sequence of mouse gluocoorticoid-induced tumour necrosis factor receptor family members
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

The present claimed sequence represents a mouse glucocorticoid induced TNRF-family related protein variant C (GTR-C). The invention also claims for GTR (AAM49016) and GTR-B (AAM49017) The GTRs are claimed to be useful for stimulating lymphocyte activity and cell death rescue. GTR antagonists are claimed to be useful for suppressing the lymphocyte activity and for inducing apoptotic deletion. GTR cDNAs and the proteins they encode are also claimed to be useful for suppressing growth of tumour cells over-expressing GTR or for the treatment of refractory

                                             The present claimed sequence represents a mouse glucocorticoid induced TNRR-family related protein variant B (GTR-B). The invention also claims for GITR (AAW49016) and GITR-C (AAW49018). The GITRs are claimed to be useful for stimulating lymphocyte activity and cell death rescue. GITR antagonists are claimed to be useful for suppressing the lymphocyte activity and cell man activity and for inducing apoptotic deletion. GITR cDNAs and the proteins they encode are also claimed to be useful for suppressing growth of tumour cells over-expressing GITR or for the treatment of refractory

This is the amino acid sequence encoding the human 312C2 T cell protein. The 312C2 proteins are expressed in thymus cells and are induced on T cells and spleen cells following activation. Engagement of 312C2 stimulates proliferation of T cell clones, antigen-specific proliferation
                    patient. The method comprises detecting in a biological sample from the patient a nucleotide or protein sequence comprising a sequence that is at lasts 80% identical to a nucleotide sequence (ADR46588-ADR46645) or protein sequence (ADR46646-ADR46703). The method is useful for detecting cancer for preparing a composition for diagnosing or treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                        113

and cytokine production by T-cells, and potentiates T cell expansion or apoptosis. The products can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions or degenerative conditions. They can be used in the regulation or development of haematopoietic cells, e.g. lymphoid cells which affect immunological responses, e.g. autoimmune

The present sequence represents human PRO364, a novel member of the tumour necrosis factor receptor family. The sequence was deduced from a bone marrow cDNA clone (see AAX87670). Methods for the recombinant production of PRO364 polypeptides, e.g. in CHO, Escherichia coli or yeast production of PRO364 polypeptides, e.g. in CHO, Escherichia coli or yeast host cells, are provided. Claimed polypeptides comprise amino acids 1-c. the marure protein) and 26-X of the present sequence, where X is any one of amino acid respoises 157-167 of PRO364. PRO364 polypeptides are useful for modulating apoptosis, NF-KB activation comprising a PRO364 polypeptide fused to a chimmeric molecules comprising a PRO364 polypeptide fused to a charmed produce such as epitope tag or immunoglobulin Fc region are also claimed. PRO364 can be used in assays to identify other proteins or molecules involved in binding interactions. This is useful for identifying inhibitors or agonists of receptor/ligand binding. The PRO364 chemotherapeutic or a growth inhibitor. PRO364 antibodies are useful in diagnostic methods, purification methods and also in therapy, e.g. as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-pRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, spendyloarthropathies, systemic selected; arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune thromborytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.

                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 11
```

```
The present invention relates to methods for stimulating or inhibiting angiogenesis and cardiovascularization. The methods involve the use of pharmaceutical compositions based on the following proteins, PRO179, PRO218, PRO344, PRO846, PRO1760, PRO205, PRO321, PRO331, PRO840, PRO877, PRO846, PRO842, PRO885 or PRO887. These proteins were identified by isolating cDNA clones encoding secreted proteins. The proteins of the invention may be used to diagnose and treat cardiovascular, endothelial or angiogenic disorders. The present sequence is one of the proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the human PRO364 protein, encoded by the CDNA clone, designated as DNA47365-1206. It is isolated from human small intestine tissue CDNA library, identified using probes based on the consensus sequence DNA4825, relative to the Incyte expressed sequence tag (EST) 3003460. This EST has homology to tumour necrosis factor receptor (TNRR) family of polypeptides. PRO364 sequence also shows homology to members of the TNR family and mouse GTR protein. This clone is assigned the ATCC deposit No: 209436. PRO364 functions as a neoplastic cell growth inhibitor and is used for treating tumours, using an especially useful for treatment of pRO655, PRO364 and PRO344. This composition is especially useful for treatment of human cancers such as breast, prostate, colon, lung, renal, ovarian and CNS, leukemia and melanoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          'n,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           185

like protein TR11 (see also AAY95879), a novel protein showing identity
to muritine glucocorticoid induced tumour necrosis factor receptor family-
related gene. The invention provides highly conserved TR11, TR11SV1 and
TR11SV2 proteins (see AAY95879-81), as well as vectors, host cells and
TR11SV2 proteins (see AAY95879-81), as well as vectors, host cells and
TR11SV2 proteins (see AAY95879-81), see well as vectors and/or TR11SV2
polypeptides are useful for treating, preventing, prognosis and/or
diagnosis of an immunodeficiency, X-linked agammaglobulinemia, severe combined
immunodeficiency (SCID), Wiskott-Aldrich syndrome or X-linked
immunodeficiency (SCID), Wiskott-Aldrich syndrome or X-linked
immunodeficiency (SCID), Wiskott-Aldrich syndrome or X-linked
cumunodeficiency (SCID), Wiskott-Aldrich syndrome or X-linked
immunodeficiency (SCID), wiskott-Aldrich syndrome or X-linked
immunodeficiency (SCID), wiskott-Aldrich syndrome or X-linked
cutagonists (e.g. antibodies) are used to treat, prevent, prognose and/or
diagnose an autoimmune disease, especially rheumatoid arthritis, systemic
clupus erythematosus, thrombocytopenia purpura or IgA nephropathy. The
polypeptides, polymcleotides and/or antibodies can be administered to
cells in vitro, ex vivo or in vivo or to a multicellular organism.
Csoluble forms of the polypeptides may also be used. Methods for screening
for agonist/antagonist compounds are also provided

useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antegonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA7721 and AAB34388 to AAB34435 represent nucleotide and protein sequences used in the exemplification of the

This sequence represents PRO364 polypeptide, which is a human glucocorticoid-induced tumor necrosis factor receptor (hGITR). The corresponding ligand (hGITRL), PRO175, is given in ABB47056. PRO364 and PRO175 may be used in a mixture with a cardiovascular, endothelial, angiogenic or angiostatic disorder. The PRO364 CDNA sequence Related from an expressed sequence tag (BST) database as having completed from an expressed sequence was isolated from an expressed sequence was isolated from a library of completed from members of the tumour necrosis factor receptor (TMRR) family of polypeptides. The PRO175 CDNA sequence was isolated from a library of complete fargments derived from human umbilical vein endothelial cells completed from the prosence of completed by procardial infarction and characterized by PRO175 or their antagonists is useful for treating cardiac hypertrophy (which is an elevated level of PGF Zalpha), trauma, a cancer, or age-related can elevated level of PGF Zalpha), trauma, a cancer, or age-related macular degeneration in a human. Administering a therapeutically continibiting angiogenesis induced by PRO364 or PRO175, or their cinhibiting angiogenesis induced by PRO364 or PRO175, or their cinhibiting angiogenesis induced by PRO364 or PRO175, or their contention inflammatory vascular-related fung targeting or as therapeutic targets for the treatment or PRO175, or their arternation and treatment or Invertible of Agease, attraction and treatment of lung or liver fibrosis, periodontal diseases, attraction of bone-forming cells, central and peripheral confidence of the proventices and returning calls, central and peripheral confidence of the proventice 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 185

Sequence 28, Application US/09512363

Patent No. 6503184

GENERAL INCPORMATION:
APPLICANT: Nuben, Steven M.
TITLE OF INVENTION: Human Tumor Necrosis Factor Receptor-Like Proteins
TITLE OF INVENTION: TR11, TR11SV1, and TR11SV2
FILE REFERENCE: PF396
CURRENT APPLICATION NUMBER: US/09/512,363
CURRENT FILING DATE: 1997-10-21
EARLIER PILING DATE: 1997-10-21
EARLIER FILING DATE: 1998-10-21
EARLIER FILING DATE: 1998-10-21
EARLIER FILING DATE: 1998-05-13
EARLIER FILING DATE: 1999-05-13
EARLIER FILING DATE: 1999-05-13
EARLIER FILING DATE: 1999-07-16
NUMBER OF SEQ ID NOWSER: 60/134,172
EARLIER FILING DATE: 1999-07-16
NUMBER OF SEQ ID NOS: 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        54 DCPKERCICYTPEXHCGDPQCKICKHYPCQPGQRVESQGDIVFGFRCVACAMGTFSAGRD 113

Sequence 6, Application US/09176200
; Sequence 6, Application US/09176200
; Patent No. 6509173
; GENERAL INFORMATION:
    APPLICANT: Ni, Jian
    APPLICANT: Ruben, Steven M.
    TITLE OF INVENTION: Human Tumor Necrosis Factor Receptor-Like Proteins
    TITLE OF INVENTION: TR11, TR115V1, and TR115V2
    TITLE REFERENCE: PF396
; CURRENT APPLICATION NUMBER: US/09/176,200
; CURRENT FILING DATE: 1998-10-21
; EARLIER PILLING DATE: 1997-10-21
; NUMBER OF SEQ ID NOS: 27
; SOFTHARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          60 LGGWPVSCPGEECCSEWDCMCVQPBFHCGDPCCTTCRHHPCPPGQGVQSQGKFSFGFQCI 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   161

s Sequence 28, Application US/09915593
s Patent No. US20020098525A1
GENERAL INFORMATION:
APPLICANT: Ni, Jian
TITLE OF INVENTION: Human Tumor Necrosis Factor Receptor-Like Proteins
TITLE OF INVENTION: Human Tumor Necrosis Factor
TITLE OF INVENTION: 000-07-27
CURRENT APPLICATION NUMBER: 2001-07-27
PRIOR APPLICATION NUMBER: 60/221,577
PRIOR PLILNG DATE: 2000-07-28
PRIOR PLILNG DATE: 2000-02-23
PRIOR PLILNG DATE: 2000-07-28
PRIOR PLILNG DATE: 2000-07-16
PRIOR FILING DATE: 1999-05-13

Zhang Z., Henzel W.J.;
Signal peptide prediction based on analysis of experimentally verified cleavage sites.";
Protein Sci. 13:2819-2824(2004).
-! FUNCTION: Receptor for TWRSF18. Seems to be involved in interactions between activated T lymphocytes and endothelial and in the regulation of T cell receptor-mediated cell death.
Mediated NF-kappa-B activation via the TRAFZ/NIK pampay.
                                                                                                                                                                                                                                                                    SUBUNIT: Binds to TRAFI, TRAF2, and TRAF3, but not TRAF5 and

T anovel leucine-rich repeat protein (LRR-1): potential involvement in 4-1BB-mediated asgnal transduction.";
MOI. Cells 12:304-312(2001).
L. FUNCTION: Receptor for TNFSF14/4-1BBL. Possibly active during T cell activation.
C-1-FUNCTION: Receptor for TNFSF14/4-1BBL. Possibly active during T cell activation.
LRR-repeat protein JLRR-1.
C-1-SUBUNIT: Interacts with TRAF1, TRAF2 and TRAF3. Interacts with LRR-1.
C-1-SUBUNIT: LAR-1.
C-1-SUBURITY: Contains 4 TNFR-Cyg repeats.
C-1-SIMILARITY: Contains 4 TNFR-Cyg repeats.
